Education

University of Central Florida
Bachelors of Science: Computer Engineering

Graduation: December 2025

Experience

Game Programmer - CCIE

Community Innovation and Education CCIE | Orlando, FL

May 2025-Present

- Redesigned and implemented a puzzle game meant to challenge spatial awareness using the Unity Game Engine.
- The game would be played by students and teachers would be able to see how they did thanks to the feedback system I implemented, hosted it on AWS.

Software Engineer - Techranger

Center for Distributed Learning University of Central Florida | Orlando, FL

May 2024 - Present

- Developed full stack web applications using modern JavaScript, TypeScript, React, Svelte, and more.
- Responsible for creating a Material Widget called Connections, mimicking The New York Times connections game.
- Managed WordPress to edit and fix UCF web pages.
- Contributed to rewriting an open-source project, Material, to use Django for the backend.

Software Engineer - RGS Healthcare

RGS Healthcare | Miami, FL

December 2022-September 2023

- Engineered and implemented robust web scraping scripts to efficiently aggregate contact information from diverse websites, substantially augmenting the company's contact database.
- Architected a comprehensive relational database populated primarily with endocrinologists, facilitating targeted email campaigns and thereby driving the company's outreach strategies.
- Designed and executed sophisticated algorithms to streamline the delivery of bulk emails to over 300,000 doctors, carefully adhering to Google's spam detection guidelines.
- Represented the company in key national conventions in cities including Chicago, New York, and California, leveraging my technical expertise to bolster sales efforts among endocrinologists.

Database Developer Intern - MD Electronics

MD Electronics | Miami, FL

April 2021-September 2021

- Created and maintained a database of over 600,000 customer records using SQLite
- Used Python scripts to mass-send emails to thousands of clients on a daily basis while bypassing the google spam filter in an efficient manner using complex tree structures and algorithms
- Designed and created a web application using Svelte for the company made to funnel customers to buy Ultrasound and RFA Medical equipment

Projects

- **Brawlback fork** Utilized C++ and **PowerPC Assembly** to contribute to an open source project meant for giving Super Smash Bros Brawl roll-back netcode. Specifically, I worked on getting replays to function better on **Linux**, fixing crashes on Vulkan, and fixing desyncs.
- **CodeClash.app** Engineered an interactive online platform for competitive programming, facilitating head-to-head challenges in solving algorithmic problems reminiscent of LeetCode puzzles. Implemented a robust ranking system mirroring chess ELO ratings, fostering an engaged and growing user community.
- **Chrissolanilla.com** Developed a comprehensive portfolio website, using **Svelte, Tailwind, Express, and Socket.io** serving as a dynamic hub, integrating features like real-time chat and an in-progress online multiplayer game. Future enhancements aim to transition the site from a personal showcase to a multifaceted platform for solutions and entertainment.
- **ChibiChain.com** Launched a thematic link aggregation platform inspired by Linktree, tailored for anime enthusiasts. The site offers extensive customization, including personalized backgrounds, link icons, and Spotify integration, with a growing base of 30 active users.
- **Chess Connect 3D** Innovated a contact management application with enhanced 3D visualizations of chess pieces, employing three.js and WebGL. Authored a custom physics engine in JavaScript, adding a unique interactive dimension to the user experience.
- **FIEA GameJam** Rapidly designed and deployed a third-person 3D bullet-hell game within a 48-hour game jam using Unreal Engine 5, showcasing the game's compatibility with Windows and Linux x86 systems.
- **Waypaper fork** Developed a customized fork of Waypaper, a GTK4 desktop application designed for managing wallpapers in Linux. This fork significantly enhances accessibility for Wayland environments, with a focus on compatibility with the Hyprland compositor.

Skills

Languages: JavaScript, Python, C, C++, Rust, Java, C#, Lua | **Frameworks:** React, SvelteKit, Next.js, Django, Flask, Express | **Tools:** Tailwind, GTK, Electron, Git (400+ contributions), Linux (Arch daily driver), SQLite/Postgres, Firebase | Fluent in English & Spanish
